EDUCATION

University of Michigan – Ann Arbor *August 2024 - May 2028*
B.S.E. in Computer Science Engineering, **Minor** in Statistics
Relevant Coursework: Data Structures and Algorithms, Machine Learning, Databases, Computer Organization, Applied Statistics

SKILLS

Programming Languages: Python, Java, C++, JavaScript, TypeScript, HTML/CSS, R, SQL
Frameworks and Libraries: React, scikit-learn, pandas, NumPy
Databases and Platforms: PostgreSQL, Supabase, Vercel
Tools and Environments: Linux/Unix, Git, GitHub, command-line tools, LaTeX
Concepts: Data structures and algorithms, machine learning, relational databases, data cleaning, web scraping

WORK EXPERIENCE

Global Origin - Livin: America - Remote August 2026 - Present
Data Analytics Extern
- Analyzed player behavior and in-game events to evaluate advertising performance, user engagement, and gameplay patterns
- Conducted UX testing and built analytics reports to identify usability issues and recommend improvements to player experience
- Built and interpreted analytics reports across multiple time periods to assess ad performance, failures, sessions, and user engagement
- Researched monetization, retention, and growth opportunities, including in-app purchases, referral strategies, and college partnerships

EOQ Lab at Ross School of Business - Ann Arbor, Michigan May 2026 - July 2026
Research Assistant
- Developed Python and Playwright scripts to download education datasets from multiple state Department of Education websites
- Cleaned, validated, and reorganized CSV, Excel, ZIP, and other research files
- Troubleshot inconsistent website structures, file formats, naming conventions, and automated download failures

Hatcher Library - Ann Arbor, Michigan October 2026 - Present
Document Delivery Worker
- Retrieve, scan, and deliver books, journals, and documents between library facilities and remote store

Additional Experience: Jewel-Osco, Grocery Stocker; Bursley Dining Hall, Dining Hall Staff; Steak 'n Shake, Hospitality Host; Marcus Theatres, Concessions Attendant

PROJECTS

github.com/skammerz

Task Manager Web Application
- Developed a full-stack Kanban-style task manager using React, TypeScript, Supabase, and PostgreSQL
- Implemented task creation, editing, deletion, searching, priority filtering, due dates, and drag-and-drop status updates
- Designed PostgreSQL tables for task and activity data and used Supabase authentication and Row Level Security to maintain private user data
- Deployed the responsive application through Vercel with loading, error, activity history, and task summary features

NFL Win Predictor
- Trained a Python logistic regression model to predict NFL home-team wins using rolling performance statistics and Elo ratings
- Cleaned and transformed nflverse datasets to calculate historical team features without incorporating future-game information
- Standardized model features with scikit-learn and evaluated predicted win probabilities on held-out data

Football Player Stats Dashboard
- Developed a TypeScript web application that parses and analyzes CSV datasets containing historical NFL player statistics
- Calculated derived metrics, including fantasy points and season-level performance summaries
- Built interactive tables and charts to visualize player performance across seasons
