EDUCATION

University of Michigan – Ann Arbor
B.S.E. in Computer Science Engineering, **Minor** in Statistics

August 2024 - May 2028

SKILLS

Programming Languages: Python, Java, C++, JavaScript, TypeScript, HTML/CSS, R, SQL

Frameworks and Libraries: React, scikit-learn, pandas, NumPy

Databases and Platforms: PostgreSQL, Supabase, Vercel

Tools and Environments: Linux/Unix, Git, GitHub, command-line tools, LaTeX

Concepts: Data structures and algorithms, machine learning, relational databases, data cleaning, web scraping

WORK EXPERIENCE

EOQ Lab at Ross School of Business - Ann Arbor, Michigan

May 2026 - July 2026

Research Assistant

- Developed Python and Playwright scripts to download education datasets from multiple state Department of Education websites
- Cleaned, validated, and reorganized CSV, Excel, ZIP, and other research files
- Troubleshoot inconsistent website structures, file formats, naming conventions, and automated download failures

Bursley Dining Hall - Ann Arbor, Michigan

November 2025 - May 2026

Dining Hall Staff

- Navigated the fast-paced environment of the Bursley dishroom, cleaning the room and dirty dishes and restocking the dining area

Jewel-Osco - Tinley Park, Illinois

January 2022 - August 2024

Grocery Stocker

- Unpacked deliveries and brought stock out to shelves, assisting customers with questions or issues

Additional Experience: Steak 'n Shake, Hospitality Host; Marcus Theatres, Concessions Attendant

PROJECTS

github.com/skammerz

Task Manager Web Application

- Developed a full-stack Kanban-style task manager using React, TypeScript, Supabase, and PostgreSQL
- Implemented task creation, editing, deletion, searching, priority filtering, due dates, and drag-and-drop status updates
- Designed PostgreSQL tables for task and activity data and used Supabase authentication and Row Level Security to maintain private user data
- Deployed the responsive application through Vercel with loading, error, activity history, and task summary features

NFL Win Predictor

- Trained a Python logistic regression model to predict NFL home-team wins using rolling performance statistics and Elo ratings
- Cleaned and transformed nflverse datasets to calculate historical team features without incorporating future-game information
- Standardized model features with scikit-learn and evaluated predicted win probabilities on held-out data

Projectile Motion Simulator

- Built a JavaScript projectile motion simulator using discrete time step calculations derived from kinematic equations
- Created an HTML canvas visualization that animated position, velocity, and trajectory in real time
- Added interactive controls for launch angle and initial velocity

Football Player Stats Dashboard

- Developed a TypeScript web application that parses and analyzes CSV datasets containing historical NFL player statistics
- Calculated derived metrics, including fantasy points and season-level performance summaries
- Built interactive tables and charts to visualize player performance across seasons

RELEVANT COURSEWORK

Completed Courses: Data Structures and Algorithms, Foundations of Computer Science, Programming and Introductory Data Structures, Discrete Math, Introduction to Statistics and Data Analysis, Linear Algebra, Differential Equations, Introduction to Machine Learning, Introduction to Computer Organization, Computer Science Pragmatics, Applied Statistical Methods II
